COURSE OUTLINE

(1) GENERAL

SCHOOL	School of Food and Nutritional Sciences			
ACADEMIC UNIT		Department of Food Science and Human Nutrition		
LEVEL OF STUDIES	Undergraduate			
COURSE CODE	165			
COURSE TITLE	ANALYTICAL CHEMISTRY			
INDEPENDENT TEACHING ACTIVITIES if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits		WEEKLY TEACHING HOURS	CREDITS	
Lectu	ires and Practice Exercises	5	5	
Add rows if necessary. The organisation of methods used are described in detail at (d,				
COURSE TYPE				
general background,	special background			
special background, specialised				
general knowledge, skills				
development				
PREREQUISITE COURSES:				
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek			
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes			
COURSE WEBSITE (URL)				
TEACHING STAFF	Lectures: Georgiou Const	antinos		
(Lectures & Laboratory exercises)	Laboratory Exercises: Georgiou Constantinos, Daferera			
CACICISES)	Dimitra, Mihou Anastasia, Mpouzas Emmanoyil, Kanakis			
	Charalampos, Astraka Constantina			

(2) LEARNING OUTCOMES

Learning outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area
- Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B
- Guidelines for writing Learning Outcomes

Analytical chemistry using the principles of chemical equilibrium, physics and statistics acquaints students with the science of measurements in chemistry. This is achieved by teaching in the amphitheater and the laboratory.

The principles of measurement science are presented in different techniques while the importance of pre-treatment of samples is pointed out. Laboratory training acquaints students while the processing of experimental data is of particular importance for preparing for work in industry, production or research.

The course is taught in the early stages of studies and brings students in contact with the processes of searching and writing reports on food science.

General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

Search for, analysis and synthesis of data and	Project planning and management
information, with the use of the necessary	Respect for difference and multiculturalism
technology	Respect for the natural environment
Adapting to new situations	Showing social, professional and ethical
Decision-making	responsibility and sensitivity to gender issues
Working independently	Criticism and self-criticism
Team work	Production of free, creative and inductive thinking
Working in an international environment	
Working in an interdisciplinary environment	Others
Production of new research ideas	

- Autonomous Work
- Decision making
- Production of new research ideas
- Production of free, creative and inductive thinking

(3) SYLLABUS

Lectures

- 1. Introduction Data processing
- 2. Chemistry
- 3. Volumetric measurements
- 4. Potentiometry
- 5. Voltammetry
- 6. Ammeter & ammeter sensors Coulometry
- 7. Introduction to spectroscopic techniques
- 8. Molecular fluorometry
- 9. Chemistry & bioluminescence Nephelometry & Turbidimetry
- 10. Atomic spectroscopy
- 11. Inductively coupled plasma mass spectrometry
- 12. Automation
- 13. Kinetic techniques
- 14. Immunochemical techniques

Laboratory Exercises

- 1. Spectrophotometric Determination of Iron, Fe(II)
- 2. Simultaneous Spectrophotometric Determination of Chromium(VI) and Manganese (VII)
- 3. Enzymatic-Kinetic Determination of Glucose by GOX-PAP method
- 4. Determination of Magnesium by Atomic Absorption Spectroscopy
- 5. Fluoride Determination with a Fluoride Selective Electrode
- 6. Conductivity

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY Face-to-face, Distance learning, etc. USE OF INFORMATION AND	Lectures in the amphitheate in the laboratory.	
Use of ICT in teaching, laboratory education, communication with students	Use Powerpoint slides. Communication with students via e-mail. Learning process support through access to e-class, online databases, etc.	
TEACHING METHODS	Activity	Semester workload
The manner and methods of teaching are	Lectures	40
described in detail.	Laboratory Excercises	30

Lectures, seminars, laboratory practice, fieldwork, study and analysis of	Reports Individual laboratory work (results	35	
bibliography, tutorials, placements,	report)		
clinical practice, art workshop, interactive teaching, educational visits, project, essay	Written individual work	20	
writing, artistic creativity, etc.			
The student's study hours for each			
learning activity are given as well as the			
hours of non-directed study according to			
the principles of the ECTS			
	Course total	125	
STUDENT PERFORMANCE			
EVALUATION	I. Evaluation of the comprehension of the lectures with		
Description of the evaluation procedure	the final examination		
Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short- answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other	II. The short examination before each laboratory exercise and the evaluation of the results / report after its completion contribute equally to the score of each laboratory exercise. In case the student does not get an average grade of more than 50%, he / she is referred to final exams.		
Specifically-defined evaluation criteria are			
given, and if and where they are accessible to students.			

(5) ATTACHED BIBLIOGRAPHY

1. Fundamentals of Analytical Chemistry. D. A. Skoog, D. M. West, F. J. Holler, S. R. Crouch 2. Principles of Instrumental Analysis. D. A. Skoog, F. James Holler, T. A. Nieman. Translated by Karagiannis, Efstathiou, Haniotaki

3. Errors & Data treatment, Problems & laboratory manual. C.A. Georgiou, Analytical Chemistry Course Notes
